• Rapid Deployment CCTV

There are situations and sites where traditional, static CCTV cameras are inpractical. A couple of examples of this are:

- Remote locations with no mains power available.
- Temporary locations where potential security breaches need to be monitored.

The solution is to use portable, CCTV equipment with the following features:

- Quick and easy to deploy with no specialist knowledge required.
- Self powered.
- Local HD recording (24/7).
- Notifications and video clips uploaded automatically to the cloud for verification.
- Two-way audio to ward-off unwanted visitors or provide information announcements.
- Simple to setup via an App.

Vigilant's Systems Solution Director, Jason Yorke explains "This is an area that Vigilant Security has been looking at for some time and various products evaluated.
Most of the products that are out there, require large, heavy battery packs or generators for their power sources, making their deployment difficult."

Introducing VSS-TE034

This equipment provides a highly visible deterrent, with high-definition CCTV coverage day and night. It can be deployed in under 20 minutes, to a height of 5 metres, and folds down allowing it to be transported in a typical family, saloon car [read more...]

2N Smart Intercoms

Intercoms serve as a key access control/building entry solution, allowing residents to see who is visiting and then open the door for the visitor. The first generation of intercoms were standalone, analogue types, often requiring complex wiring and manual adjustments for them to function.

2N developed the first LTE and IP intercoms in the world and is a global leader for innovative, IP door intercom systems and elevator communications.

Unlocking possibilities

IP technology has taken intercoms into a completely new era where the user is no longer limited by space; they can check and buzz the door open from anywhere with their smart device.

❶ Main door communication and access

2N® IP Verso 2.0
Precisely match the needs of your project every time. Combine up to 20 different modules. Provide residents with full HD video calling and secure entry with access readers that support multiple access credentials
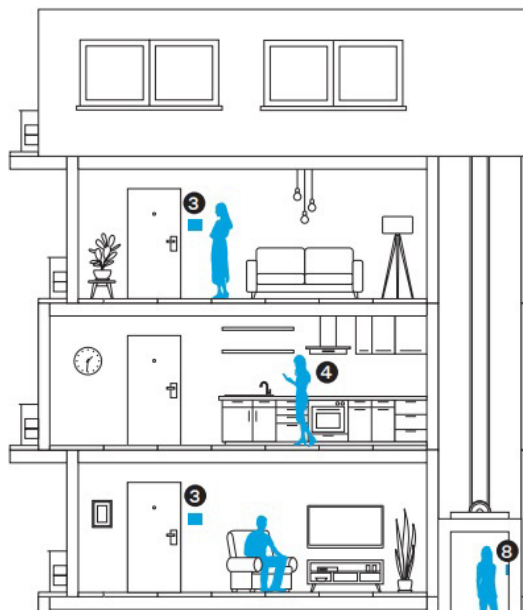

❷ Garages and car park

2N® IP Force
One of the world's strongest intercoms can easily withstand accidental impact from car mirrors. To restrict vehicle access automatically, pair it with an Axis camera for license plate recognition

❸ Answering calls in homes

2N® Indoor View
Sleek answering unit with 7" touch screen that enhances any interior. Offer a smart living experience with easy integration to home automation and other advanced features

❹ Answering calls remotely

❺ Secure common areas

2N Access Unit 2.0
Want cohesive design, modern technology, and versatile installation? Secure common areas with this smart access reader with a built-in controller

❻ Mobile access

2N® Mobile Key
Combine free mobile credentials with our revolutionary keyless access. The patented WaveKey technology powering 2N® Mobile Key ensures access is secure, fast and reliable

❼ Concierge desk

2N® IP Phone D7A
No modern project is complete without an IP phone that offers two-way video communication. Add the personal touch to concierge desks as well as advanced features & heightened security

❽ Access control for elevators

2N Access Unit 2.0
Don't neglect elevator access! Floor-restricted access is an important part of a complete residential access system that wants to prioritize resident security
