Cost-effective CCTV Cloud Solutions

Businesses of all sizes can harness the power of the cloud to simplify their security setup, ensure predictable costs and manage their system with fewer resources all while minimizing installation time.

Information is available at any time and easily accessible from anywhere, on any device. Take action on-the-go with the ability to remotely grant access, view video or lock doors.

The Elements platform can scale to power security deployments of any size. It also seamlessly integrates with the LenelS2 OnGuard® access control system for enterprise businesses.

The Elements web portal enables a unified video and access control experience providing system configuration, real-time video verification of alarms and events, and viewing of recorded video in a single user interface.
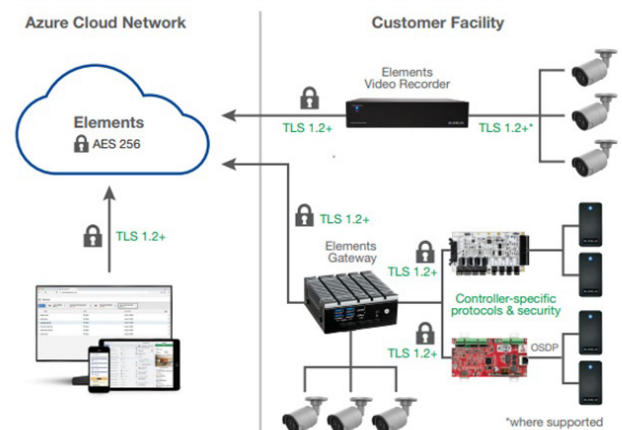

Vigilant's Systems Solution Director, Jason Yorke explains "Elements is well suited for deployments of any size. From a single camera to thousands of cameras, this easy-to-use system is a great tool for monitoring your CCTV, from anywhere."

Cyber Security & Privacy

The Elements solution was built with "Privacy by Design" security principles and is secured through end-to-end encryption.

Users can be assured that all connections between the Elements Gateway and the cloud use industry-standard encryption and, since all traffic is initiated from on-site devices, no inbound ports need to be opened in your network security firewall.

For enterprises, the solution provides the Elements OnGuard Connector which enables the OnGuard access control system to seamlessly communicate with the Elements cloud. The OnGuard Connector provides enterprises with the flexibility to run the on-premise OnGuard system at its headquarters while satellite offices or branches are secured by the Elements solution.

Paxton 10

Access Control | Video Management | One System

Paxton10 is a futureproofed, online access control and video management solution. Accessible from any device with an internet connection, Paxton10 software makes it easy to manage and monitor the security of your site. Scalable up to 100 sites on a single system with up to 1,000 doors, 1,000 cameras and 50,000 users.

The software has a range of intelligent features making it easy to tailor your security system to your specific needs. Manage building security and video surveillance with your own customised dashboards, run event reports, view live and recorded video, and create and manage users all in one place.

Paxton10 software is optimised for use on PCs and tablets, with the free Paxton Connect app providing easy and flexible site management from your smartphone (available on iOS or Android).

Apps for Paxton 10

Straightforward to use, the Paxton Connect app contains five features in one smart platform and enables installers and system users to manage multiple sites remotely from a smartphone or tablet. Available to download free from the App Store or Google Play.

The Paxton Key app allows system users to make use of their smartphone or smartwatch in place of electronic tokens or traditional keys with a Paxton10 system. These are called smart credentials and are completely free with Paxton10. Paxton Key is available for Apple Watches and Wear OS devices, as well as iOS and Android.
